	A. Reagents tied-up with an Automated System for Identification and Susceptibility of all Bacteria and Yeast											
	- can identify and perform susceptibility for all gram negative and gram positive bacteria and yeast											
	- at least 60 tests capacity											
	- 8-12 hours earliest identification and susceptibility of bacteria											
	- closed system											
	- Quality control: ATCC strains (S. aureus 29213, E. coli 25922, P. aeruginosa 27853, E. faecalis 29212)											
	- completely walk-away machine											
	- extensive Data Management System for epidemiological, antibiotic / susceptibility, trending and statistical analysis											
	- provide rapid and accurate recognition of bacterial resistance mechanism											
	- automatic self-calibration											
	- open for upgrades											
	- updated CLSI data											
	- provide free consumables:											
	- 0.45% saline

	REAGENTS TIE UP WITH MACHINE (for items on A and B) , FULLY AUTOMATED INTEGRATED CHEMISTRY and IMMUNOCHEMISTRY ANALYZER, floor type, with AVR and UPS.											
	Reagents tied -up with the following machine specifications, terms and conditions:											
	a. Direct Distributor shall be compliant to and certified by International Standards for quality of reagents, personnel and services.											
	b. Random Access Integrated Chemistry and Immunochemistry Analyzers, most recent model, floor type, with AVR and UPS, for Main laboratory, with a back up unit that uses the same reagents, calibrators and controls.											
	c. All machines must have a throughput of 800 - 1200 tests and above per hour; bar coded reagent loading and does not require manual reagent preparation.											
	d. All machines must be equipped with programs like test counters, reagent inventory, quality control chart - Levy-Jennings Graph and Westgard Rules.											
	e. The machines must be capable of performing all the tests stated below. The winning bidder shall provide all required reagents for the said examinations. This is inclusive of third party controls, calibrators, test tubes (60 packs of SST tubes at 100 per pack, 20 packs of red top at 100 tubes per pack and 5 packs of amber microtainer with SST at 100 per pack in a month).											
	f. All machines must be capable of quantifying interferences in samples caused by hemolysis, lipemia and icterus without using reagents.											
	g. Lot calibration of all reagents must be stable until onboard expiration.											
	h. All machines must be connected to a Computer set; flat screen monitor of at least 14 to 21 inches, CPU capable of storing 12 months to 1 year patient data with customized and simplified interface program for result forms and Quality Control Charts; Continuous ink flow printer with tank and resetter maintained for continuous use until end of contract.
